

# Output Options

# Curves

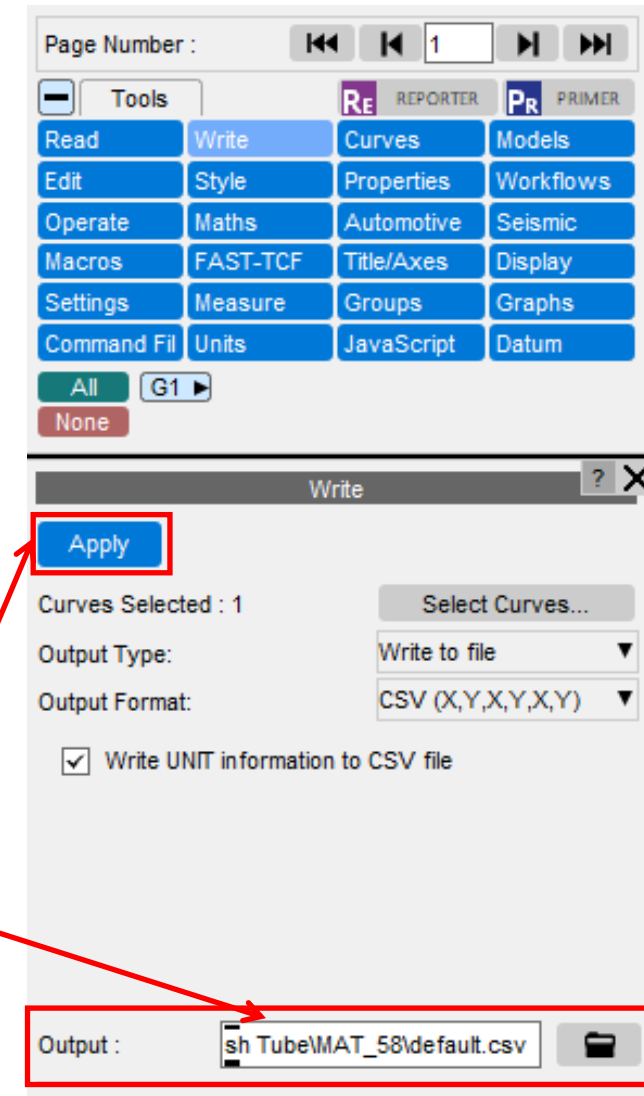

In the **Write** menu, curve data can be written out to a file or to a pop-up on the screen.

First select the **Curve(s)** to be written out.

Then select the type of file e.g. CSV.

Give the path and filename.

Press **Apply**.

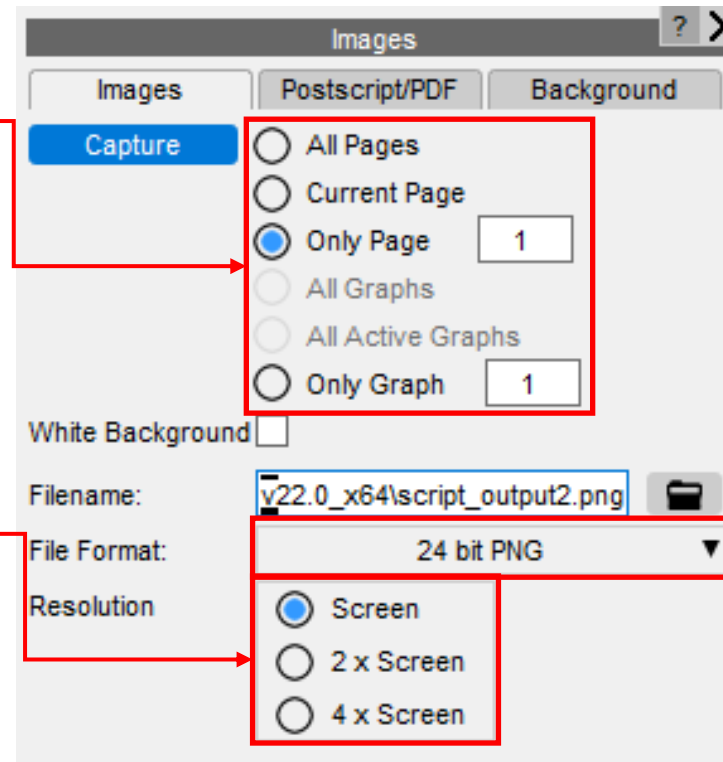

# Images

Images of any combination of the current graphs can be written out to a file.

Images can be generated using either the screen resolution or at 2 / 4 times the screen resolution for printed output.

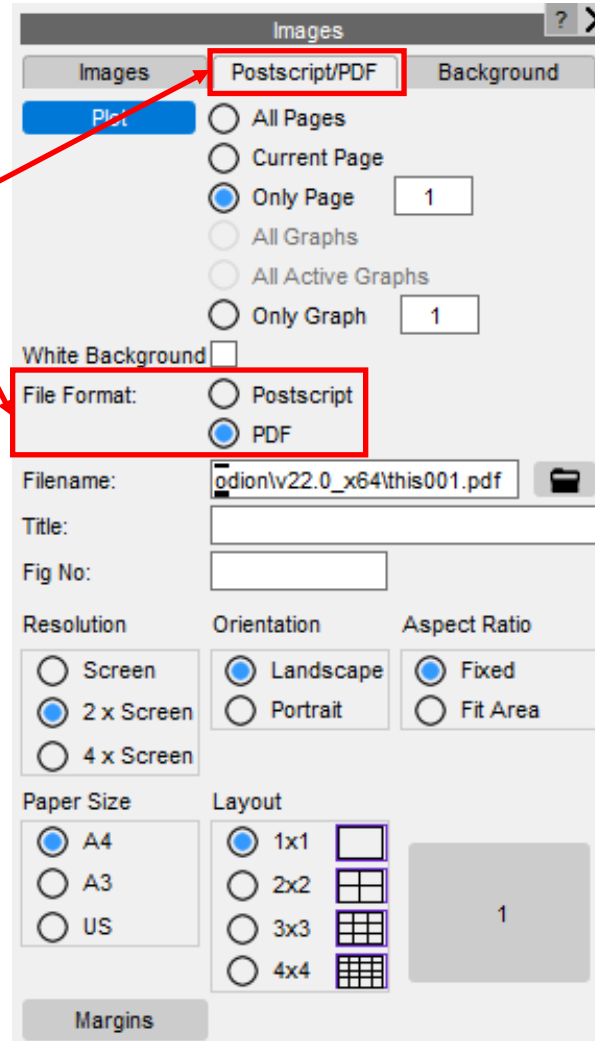

There are a number of options for image output formats, including PNG and GIF.

# Postscript

T/HIS can also write out images as both **Postscript** and **PDF** files.

PDF and Postscript files are generated using raster images to reproduce the screen contents exactly.
